

THE APIARY · THE MEMORY

Honeycomb

One shared, lasting memory for all your AI coding agents.

WHAT IT IS

Honeycomb gives every one of your agents a single shared memory that survives sessions, travels across tools, and gets sharper over time. Learn something once, and it is there everywhere.

ARCHITECTURE AT A GLANCE

Surfaces

CLI · dashboard · harness shims

Daemon :3850

capture, distill, recall, compound

Storage

Deeplake: memory, graph, sessions

KEY SPECS

DAEMON 127.0.0.1:3850	HARNESSES Claude Code, Cursor, Codex (3 more in progress)
INTERFACES CLI, HTTP API, MCP tools	STORAGE Activeloop Deeplake (hosted or self-host pg_deeplake)
DASHBOARD Hive portal at 127.0.0.1:3853	MEMORY Three-tier, self-tidying, versioned

INSTALL

```
# macOS / Linux
curl -fsSL https://get.theapiary.sh | sh

# standalone
npm i -g @legioncodeinc/honeycomb
```

INTEGRATES WITH

Built on Activeloop Deeplake and Hivemind. Legion Code adds the multi-tier memory, skill sharing, and the local daemon.

BINDS

127.0.0.1:3850

loopback only

AGPL-3.0

HIGHLIGHTS

✓ Claude Code · Cursor · Codex

✓ Deeplake-backed

✓ Self-host option

✓ MCP + CLI + API

SEE IT HOLD UP

Capture a decision once in one assistant. Recall it anywhere: same daemon, same Deeplake, any harness. A discovery by one engineer reaches the whole team on their next session.
